

# DUCHESNE COUNTY 80's METRIC WIRE 2022

## DRIVER MUST BE 18 YEARS OF AGE OR OLDER ON DAY OF EVENT

1- Any METRIC CAR will be permitted. NOTE: If you break any of these rules and we feel you're being deceptive to create an advantage while doing it, you won't participate. You won't get any options to fix it. If you have any questions, please contact us.

2- Remove the following, prior to entering the fairgrounds: windows, plastic bumper covers, headlights, taillights, all chrome, and mirrors. Interior must be swept clean of debris and glass.

3- DISABLE THE AIR BAG SYSTEM!

4- When using chain, it can only be a max of 3/8 diameter. If using wire, then only 3 strands of #9 from TSC, ACE or similar are permitted. Washers may not be used to reinforce a hole you run wire or chain through.

5- Under the hood, you may take plastic fender wells out, strip plastic and any other unneeded parts. Battery must be mounted inside of car securely and safely but cannot reinforce the car. You may need to lengthen the cables to reach it.

6- No crossbreeding engines, transmissions, or rear ends. Must be same make as car, (i.e., GM to GM, Ford to Ford and Mopar to Mopar) Engine must appear to be a factory engine with the stock exhaust manifolds. You may weld spider gears in rear end to make it Posi traction, however, do not touch any other part of the rear end with the welder. You must use the factory rear end housing, gear, and axles for the car you are running.

7- Engine must be mounted with the stock mounts in the stock position. No welding of engine mounts. Factory transmission cross members only and the cross member must be bolted in, not welded. If the car has a wiring harness in front of core support, then you may move it behind core support. No stand alone or lengthened harnesses are permitted. Firewall may be cut out or pounded back behind distributor.

8- Must use the OEM column shifter and linkages or the OEM floor shifter and its linkages, whichever shifter the car came equipped with, OR you may use 1 solid piece of 3/8 threaded rod direct to the linkage. Must use the OEM gas pedal and brake pedal, as well. However, the ignition may be bypassed.

9- No stock fuel tanks permitted inside of car. If using a fuel cell or boat tank, then the cell or tank needs to be securely fastened to the floor with bolts. However, your mount cannot re-enforce the car. Ratchet straps or wire are not approved to mount fuel cells. Injected cars may use an internal or external high PSI pump. The 85 F150 pump style is ok.

10- ALL body bolts, mounts, and washers must be factory stock. No altering permitted. If they are broken or rusted off, then you may add 3 loops of wire in the immediate area to secure the body just as the bolt did.

11- Doors can only be chained or wired with one chain or 3 strands of wire per hole. Do not chain/wire more than 8 places per door. The wire at the bottom of the doors may go around the frame. Driver's door may be reinforced, but if reinforcement is on the outside or inside, do not overlap the door seam by more than 3 inches.

12- Trunks and hoods can only be chained or wired with no more than 8 total places in each. You may use chain, or 3 strands wire per place. 2 of these places are permitted to go around the bumper and/or frame. TRUNKS AND HOODS MUST BE OPEN DURING INSPECTION! Please create two 10-inch holes in hood for fire detection. Deck lids and/or tailgates must be in factory position on the car. You cannot smash down or remove speaker deck from car. You may dish the rear of the trunk no more than 8". This will be measured from across the top of the quarter panels down. You may cut the rear of the trunk lid off if you choose to. Do not tuck, wedge, pre-bend, notch, fold, or anything else you can think of to modify the trunk, hood, quarter panels or fenders. No welding washers to the body when using wire or chain. Note: You do not have to run a trunk lid or hood but you must have something covering the mechanical fan if you run one. The rear frame behind the humps may be dimpled or notched and at no time can this be re-welded.

13- Air filled tires only. Must start with a stock wheel. An 8" or smaller wheel center may be added, along with a valve stem protector.

No other welding is permitted on the wheels.

14- DO NOT CREASE THE BODY OR FRAME. DO NOT FOLD THE TRUNK LID. IF YOU CREASE THE BODY OR HAMMER THE BODY OR FRAME, BE PREPARED TO CHOP THE WHOLE AREA OR MORE EXCEPT WERE NOTED IN RULE #11 LAST SENTENCE.

15- You may have a 4-bar cage. A 62" door bar is the max length, and that includes the dash and seat bar. You may install a roll over bar that runs perpendicular to the door bars and can bolt or wire to the roof in 2 places. Cage bars cannot be any larger than 6".

16- 2 pieces of chain or wire can be used in the front window for your protection.

17- Steering and suspension parts can only be the parts that came on the car, or the parts must be replaced with box store replacements. No purpose-built parts can be used in place of OEM parts. Twist-in coil spring boosters can be used to help out achieve bumper height.

18- Bumper swaps are permitted by only using 1980 & newer bumpers or a straight piece of open-ended square tube measuring 4x4x1/4 with a max length of 70". Cars that came with bumper shocks must use the shocks for that car. Shocks may bolt/weld to the shock plate and may bolt/weld to the bumper. You may collapse the shock and weld it all the way around to limit it from sliding in and out of itself. You may weld the shock to the front plane of the frame. If your car did not come with bumper shocks,

then you may weld the bumper directly to front of the frame. No squaring or shortening. Instead, use filler in the gaps, if necessary. In either case, you may weld 2 pieces of 2x6 steel straps on each side -- from the frame to the bumper, to ensure the bumper stays on. Do not use homemade, loaded, or seam welded bumpers unless using the above-mentioned square tube. Max bumper height will be 18" to the bottom.
